

AYESHA AZIZ

Experienced Frontend Developer

Guildford, UK | 07455 717024 | ayeshaaziz44436@gmail.com

PROFESSIONAL SUMMARY

Experienced frontend engineer with 9+ years building high-performance systems. Expert in React/Angular architecture, performance optimization (30% load reduction), and quality excellence (40% defect reduction). Proven leader in TDD/BDD standards, team mentoring, and critical infrastructure delivery. Full-stack capabilities: Node.js, databases, DevOps, system architecture.

CORE COMPETENCIES

Frontend	Languages	Testing & QA	Tools & DevOps
React, Angular, RxJS, NgRx, Redux	JavaScript, TypeScript, HTML5, CSS3, Node.js	TDD/BDD, Jasmine, Karma, Jest, JMeter	Git, Jenkins, Docker, Jira, Confluence

PROFESSIONAL EXPERIENCE

Extron Electronics, Dartford, UK

Software Engineer | 2019 - 2025 (6 years)

- Optimized UI architecture for high-resolution video wall processors, reducing load times and latency by 30%. Implemented NgRx and RxJS for efficient state management, improving stability and maintainability. Developed Internal Design System and implemented design library along with the EMS cross platform solution.
- Led Agile transformation:** Established TDD/BDD standards across team, applied SOLID principles, cut post-release defects by 40%, facilitated daily standups and sprint retrospectives, identified and removed technical impediments. Mentored junior developers and fostered strong code review culture.
- Tech Stack:** React, Angular, TypeScript, RxJS, NgRx, Redux, Jasmine, Karma, Protractor, Jenkins, Electron, HammerJs

Nicander Ltd, Billingham, UK

Frontend Developer | 2015 - 2019 (4 years)

- Delivered CHARM ATMS + AFMS asset management systems
- Transformed raw roadside data into formatted messages for motorway signage and traffic signals, improving real-time driver communication
- Engineered data processing layer that converted sensor telemetry into clear, actionable traffic information displayed on road infrastructure.
- Tech Stack:** AngularJS, JavaScript, Typescript, Node.js, Express, MongoDB, GraphQL, C#, WebSockets, Jira, Git, Docker

Saggezza, Sunderland, UK

Software Developer | 2014 - 2015

- Built CCM transaction simulation tools; improved QA cycle time by 25%
- Tech Stack:** Java, JavaScript, HTML/CSS, SQL Server, Customer Communication Management (CCM) systems

PORTFOLIO PROJECTS & CONTINUOUS LEARNING (2025 - 2026)

Sweet Hub - Full-Stack eCommerce (Personal Project, 2025 - Present)

- Architected full-stack monorepo with shared Redux store, generic CRUD factory, and React Query integration; optimized code splitting across 7 manual chunks (MUI, Recharts, jsPDF) **reducing main bundle to 13 KB**
- Built responsive eCommerce platform (Website + Management Dashboard + Capacitor mobile app) with real-time inventory sync, order management, and Supabase PostgreSQL backend; implemented Jest + React Testing Library for comprehensive coverage
- Engineered scalable data architecture using generic CRUD patterns, React Query caching, and Supabase integration; implemented PDF generation, barcode scanning, and real-time inventory updates across 9 database tables
- Tech Stack:** React 18, TypeScript, React Query, Redux Toolkit, Supabase, PostgreSQL, Jest, React Testing Library, Capacitor

EDUCATION

MSc Computing – University of Sunderland, 2015 | **MSc Computer Science** – Virtual University, 2012

KEY ACHIEVEMENTS

- 30% Load Reduction:** Enterprise video processor performance optimization (Extron)

- **40% Defect Reduction:** TDD/BDD standards implementation + team mentoring (Extron)
- **20% Uptime Improvement:** Scalable architecture for Highways England critical infrastructure (Nicander)
- **Team Leadership:** Mentored 4+ junior, 2 senior developers; established architecture standards across organizations
